HKS Medical Information Systems Releases OTTR Webportal

OMAHA (Neb.)-HKS Medical Information Systems is proud to announce the release of its OTTR WebPortal Product. OTTR WebPortal is a web based companion product for its flagship software application, OTTR.

OTTR is a longitudinal patient tracking system that utilizes client server technology. All data is stored in either a Microsoft SQL Server 2000 or Oracle database running under Microsoft Windows 2000 server or Microsoft Windows Server 2003. The OTTR 5.0 client runs under Microsoft Windows 2000 Professional or Microsoft Windows XP Professional.

OTTR WebPortal solves the challenge of allowing access to patient data from remote locations using varied technologies such as web browsers, differing OS platforms and handhelds. OTTR WebPortal is intended for use by team clinicians away from their desks or clinicians from home or off-campus. For centers who wish to build a tighter relationship with their referring physicians, OTTR WebPortal optionally supports remote access by referring physicians. When referring physicians access the system, they view only their referred patients.

OTTR WebPortal employs a server side java based web-server running on a Microsoft Windows 2000 or Microsoft Windows 2003 Server platform. It uses ODBC connectivity to connect to either a Microsoft SQL Server 2000 or Oracle database.

Clients connect via 128-bit SSL encryption using any web browser. This allows users to connect from a variety of platforms including Microsoft Windows, Macintosh, unix, and handhelds.

OTTR WebPortal allows for the viewing of all pertinent patient data stored in the database under the same extensive security model employed by the OTTR 5.0 client / server application. It also allows for the recording of patient progress notes by a clinical user.

OTTR WebPortal is available for purchase and interested clients should contact sales for pricing at 402-398-2200 or sales@hksys.com

About HKS Medical Information Systems

HKS Medical Information Systems, Inc. is a private company headquartered in Omaha , Nebraska . Founded in 1993 by Dr. Byers Shaw of the University of Nebraska Medical Center, Hubert Hickman and Paul Kenyon Ph.D., HKS products improve the quality of patient care and operational efficiencies for its clients. Products include OTTR, the market leader in patient tracking software for organ transplant centers and OTTR-HLA, which is a comprehensive software system to support the patient management, reporting and regulatory needs of the HLA laboratory.
